RICO data loggers,
the smart solution for your pasteurisation data

In future, you will be able to create high-precision and efficient pasteurisation data logs.
Retrofitting the data logger is straightforward and possible even on older, existing systems.

The data logger is simply installed in the existing control cabinet and connected to present control electronics via the existing interfaces.

If your pasteuriser does not have a touch panel to display actual values, one can be retrofitted as an optional extra. However, operation is also possible without a display device. In this case, logs are written to a USB flash drive or a computer's web browser. New RICO pasteurisers come with the data display already integrated into the existing touch panel.

Actual values can be logged on a:
touch panel / USB flash drive / computer's web browser

Your benefit:

+ **Intuitive, simple operation**
  the user interface can be accessed via a web browser

+ **Modular construction**
  to suit customer requirements

+ **Automatic recording of set and actual values**
  [selected product and time]

+ **Calculation of the achieved pasteurisation units**

+ **Data can be opened in Microsoft Excel**

+ **Backup on a USB flash drive or synchronisation with the customer's network**

Together. Creative ❯ Innovative. Successful.

=RICO=

*MACHINES AND EQUIPMENT
FOR THE BEVERAGE INDUSTRY*

Technical details:

RICO Data Logger – Standard

+ Automatic recording of set and actual values, each with reference to the selected product and time

+ Modular construction to suit customer requirements – measurement values can be read from the control unit or directly from the sensors

+ Data is saved in .csv format and can be opened in Excel

+ Calculation of the achieved pasteurisation units is possible

+ Backup on a USB flash drive

+ Retrofits on older, existing systems are also possible

+ Separate monitor as an option

RICO Data Logger – Comfort

+ Automatic recording of set and actual values, each with reference to the selected product and time

+ Modular construction to suit customer requirements – measurement values can be read from the control unit or directly from the sensors

+ Data is saved in .csv format and can be opened in Excel

+ Backup on a USB flash drive and synchronisation to the customer network (FTP, SMB, etc.) is possible

+ Connection to higher-level systems (OPC, TCP, MQTT, databases, etc.)

+ Graph display in a web browser (customer network) from any PC

+ Calculation of the achieved pasteurisation units is possible

+ Extension to specific customer requirements is possible

+ Retrofits on older, existing systems are also possible

+ Separate monitor as an option

WORLD MARKET LEADER

EVERYTHING FROM A SINGLE SOURCE

Thanks to our integration into the **PÜTZ GROUP** and the resulting **synergy effects** we are able to offer you not just machines and equipment for the beverage industry, but also the appropriate testing technology.

FOR OVER 40 YEARS we have been successfully producing complex, customer-specific individual machines and complete systems for the beverage industry.

We will get your production on the path to success.

We look forward to receiving your request!
